WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, Form 86ab, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (1).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on Forms 86ab is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 15 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

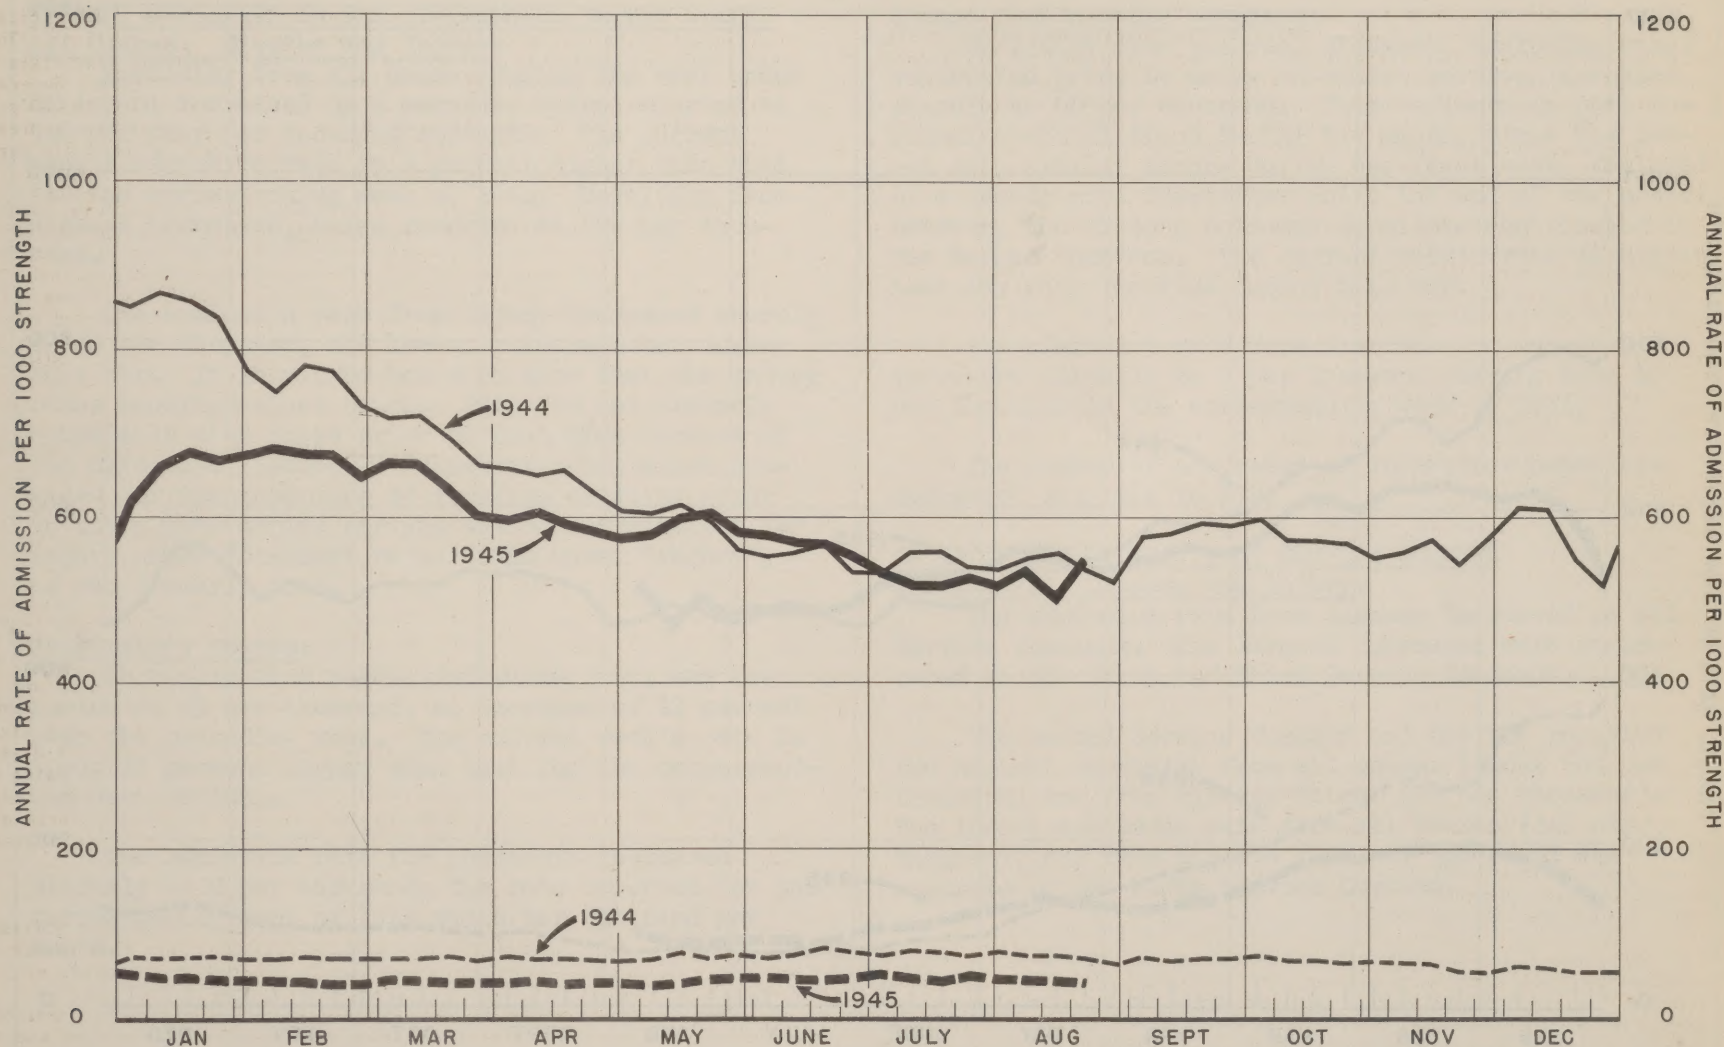

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

All Causes: Disease and Injury:

Morbidity from all causes during the week ended 24 August increased by 9 percent, being reported at 548 per year per thousand strength. The current week's admission rate is 2 percent higher than that for the corresponding week of 1944. Morbidity from disease increased, being reported at 508 per thousand.

The admission rate from injury decreased sharply to 40 per thousand, the lowest rate reported during this war. It should be borne in mind that the injury rates reported since October 1944 are not strictly comparable with those prior to that time because of the directive (issued 29 September 1944) which provided for the reporting of injuries existing prior to entry into active service and of readmissions for injury under "disease" rather than under "injury", as was formerly done.

Respiratory Causes:

Morbidity from colds, influenza, etc. was reported at 83 per thousand, an increase of 12 percent over the preceding week. The current week's rate is about 25 percent higher than that for the corresponding week of 1944.

The admission rate for pneumonia increased slightly to 8 per thousand; the rate reported for the corresponding week of 1944 was 6 per thousand per annum.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding cases contracted prior to entry on active service, increased sharply to 60 per thousand. This reflects in part the normal cyclical trend during the month, since the lowest rate usually occurs during the first week, followed by a steady rise thereafter until the end of the month; however, the victory holidays doubtless contributed to the marked increase. The current week's rate is higher than any rate reported during this war.

The admission rate from diarrhea and dysentery increased slightly to 8 per thousand, having been 10 per thousand in the corresponding week of 1944.

The number of new cases of infectious hepatitis decreased slightly to 178.

VARIATION IN MORBIDITY BY SERVICE COMMAND

All Causes: Disease and Injury:

The admission rate from disease increased in all Service Commands. The largest increases were registered in the First and Third Service Commands.

The Second Service Command and the MDW reported the highest morbidity from all causes (about 600 per thousand) and from disease (about 570 per thousand). The lowest admission rate from all causes (441 per thousand) and from disease (406 per thousand) was reported by the Fifth Service Command.

COMMENT ON CURRENT TRENDS (CONT'D)

The Fourth, Eighth, and Ninth Service Commands reported the highest morbidity from injury (about 45 per thousand). All other Commands reported rates of less than 40 per thousand.

Respiratory Causes:

Morbidity from colds, influenza, etc., increased sharply in all Service Commands. The MDW reported the highest morbidity from these causes (163 per thousand), while the lowest was registered by the First Service Command (57 per thousand). All Service Commands except the MDW had rates under 90 per thousand.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding EPTS cases increased in all Service Commands, except the Ninth and MDW, where the rates remained unchanged. The highest morbidity from these causes was in the Third Service Command (85 per thousand).

Low morbidity from diarrhea and dysentery was reported in every Service Command, with none reporting a rate in excess of 10 per thousand, except the Second Service Command, with a rate of 15 per thousand, due chiefly to an outbreak of bacillary dysentery at Camp Kilmer, N. J.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 29.4 per thousand strength for the week ending 24 August as compared with 29.8 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, decreased to 84.9 per thousand troops in this country.

PATIENTS REMAINING UNDER TREATMENT: 24 August 1945:

The number of neuropsychiatric cases remaining was 34,414 or about 700 more than at the end of the previous week. Non-battle injury patients remaining numbered about 48,800. The number of battle casualty patients remaining decreased by about 2800 to number 102,282.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

During the week ending 24 August there were 8827 enlisted personnel discharged by CDD, or about 300 more than the previous week. Forty-four percent of these discharges were reported by General Hospitals and 36 percent by Convalescent Hospitals. Included among the 8827 CDD's were 2447 neuropsychiatric cases.

FORM SG-902-8 July 1944

RESTRICTED

COMMENT ON RECENT DEVELOPMENTS

FOR THE FOUR WEEK PERIOD ENDING 27 JULY 1945

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from Forms 86ab rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the four week period ending 27 July 1945 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This Report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and from colds, influenza, etc. are presented on page 25. Similar charts for specified diseases appear on pages 27, 29, and 31. A chart showing mortality trends is presented on page 33. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the Service Commands is given on pages 34 and 35. The most pertinent morbidity data for individual stations are presented on pages 36 to 57. On pages 58 and 59 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is directed to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this Report as given on page 2. The term "month" in this report is used to denote the four or five week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES: DISEASE AND INJURY:

The admission rates from all causes and from disease for the Army in the continental United States decreased 10 percent in July. The Navy shore stations in this country also reported a decrease in morbidity in July. The Army's admission rate from disease during July (471 per thousand) was about the same as for July 1944.

The admission rate from injury decreased slightly in July to 48 per thousand. The recent experience is not strictly comparable with that prior to October 1944 because the relatively low level of injuries since that time reflects in part at least compliance with the directive issued 29 September 1944 which required re-admitted and EPTS injuries to be reported as "disease" and not as "injury".

All Service Commands reported a decrease in morbidity from disease during July. The largest decrease (about 15 percent) was registered in the First, Second, Third, Sixth, and Seventh Service Commands.

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

The Eighth and Ninth Service Commands reported the highest morbidity from all causes and from diseases (both rates, however, being only about 8 percent higher than for the country as a whole). The lowest admission rate from all causes and diseases were registered in the Fifth and Seventh Service Commands (about 10 percent lower than for the entire country).

The admission rate for injury decreased substantially in most Service Commands, with the Third, Fourth and Eighth Service Commands and the MDW reporting a change in excess of 10 percent. The highest morbidity from injury during July was reported by the Fourth Service Command (58 per thousand), closely followed by the Eighth Service Command. Most of the other Commands reported rates of about 40 per thousand or less.

RESPIRATORY DISEASES:

During July the admission rates for colds, influenza, etc. decreased about 25 percent. The current month's morbidity was somewhat higher than during the corresponding month of 1944, although before June the experience had been considerably lower than in 1944. Morbidity from respiratory diseases at shore stations of the Navy in this country remained about the same; the level experienced in the Navy was notably higher than the Army.

Morbidity from colds, influenza, etc. decreased in all Service Commands. Decreases of 15 percent or more were recorded in every Service Command except the Fourth. The largest decreases (over 30 percent) was registered by the Second, Third and Fifth Service Commands. The Eighth Service Command reported the highest admission rates (95 per thousand). The lowest morbidity was reported by the First Service Command (48 per thousand).

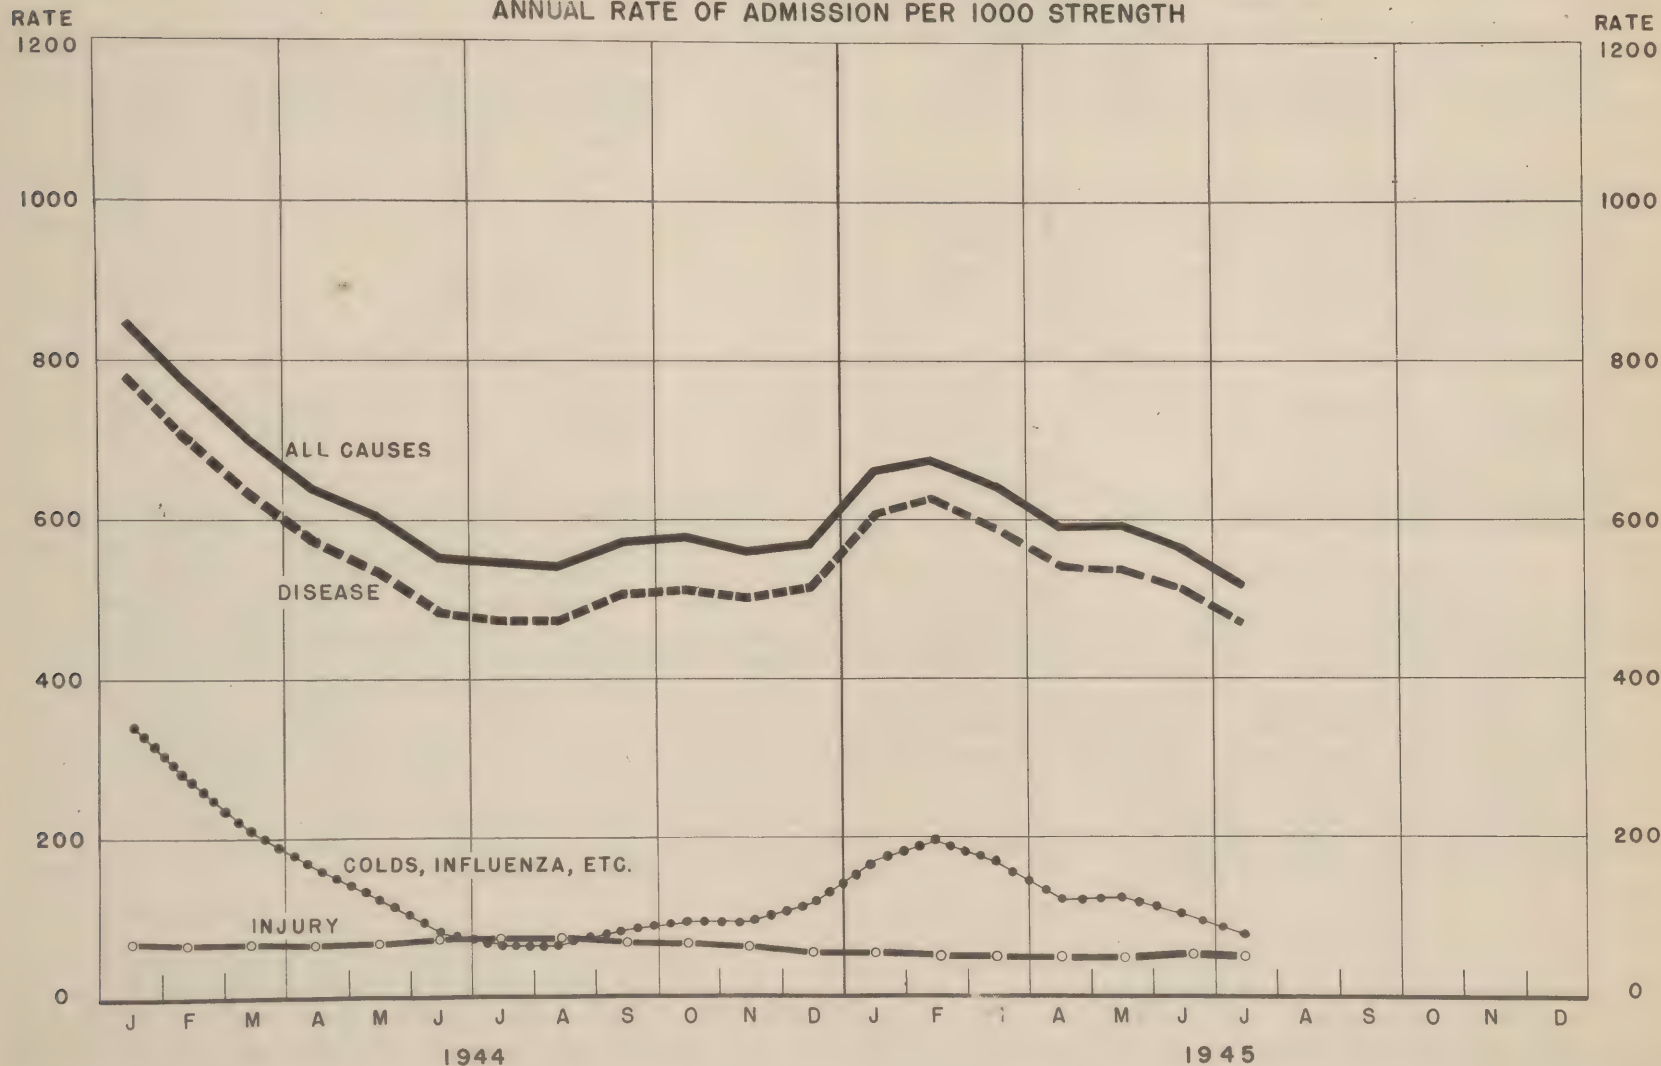

Morbidity from all forms of pneumonia combined decreased by 25 percent to 8.2 per thousand. The admission rate for July 1945 was about 25 percent higher than for July 1944. Most of the Service Commands experienced a decrease in July. The Eighth Service Command had the highest morbidity rate for this cause (12 per thousand), closely followed by the Fourth, Fifth, and Sixth Service Commands.

In July, atypical pneumonia accounted for 75 percent of all pneumonia admissions. The proportion of pneumonia cases diagnosed as atypical was highest in the First and Fourth Service Commands and MDW all of which exceeded 80 percent.

MORBIDITY FROM — ALL CAUSES — DISEASE

— INJURY — COLDS, INFLUENZA, ETC.

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery decreased 10 percent in July, but continued to be lower than any rate reported in 1944. The admission rate for July 1945 was about 45 percent lower than for July 1944. The MDW was the only Service Command to report a rate in excess of 9 per thousand.

VENEREAL DISEASES:

Morbidity from venereal diseases, excluding cases contracted prior to entry into active service increased 5 percent in July and was about 30 percent higher than for July 1944, and, in fact, higher than for any month of 1944.

The admission rate for syphilis, excluding EPTS cases, increased about 15 percent in July to 5.0 per thousand, the highest rate in 1944-45. The admission rate for venereal disease other than gonorrhea and syphilis decreased to .8 per thousand.

Most Service Commands reported about the same morbidity from venereal disease, excluding EPTS cases, in July as during June. The Eighth Service Command was the only one to report an increase of more than 10 percent, while a corresponding decrease was shown only by the First Service Command. The highest rate in July was reported by the Third and Fifth Service Commands (53 per thousand). Only the First and Second Service Commands and the Military District of Washington had rates of less than 40 per thousand.

The venereal disease cases remaining under treatment on 27 July are shown below:

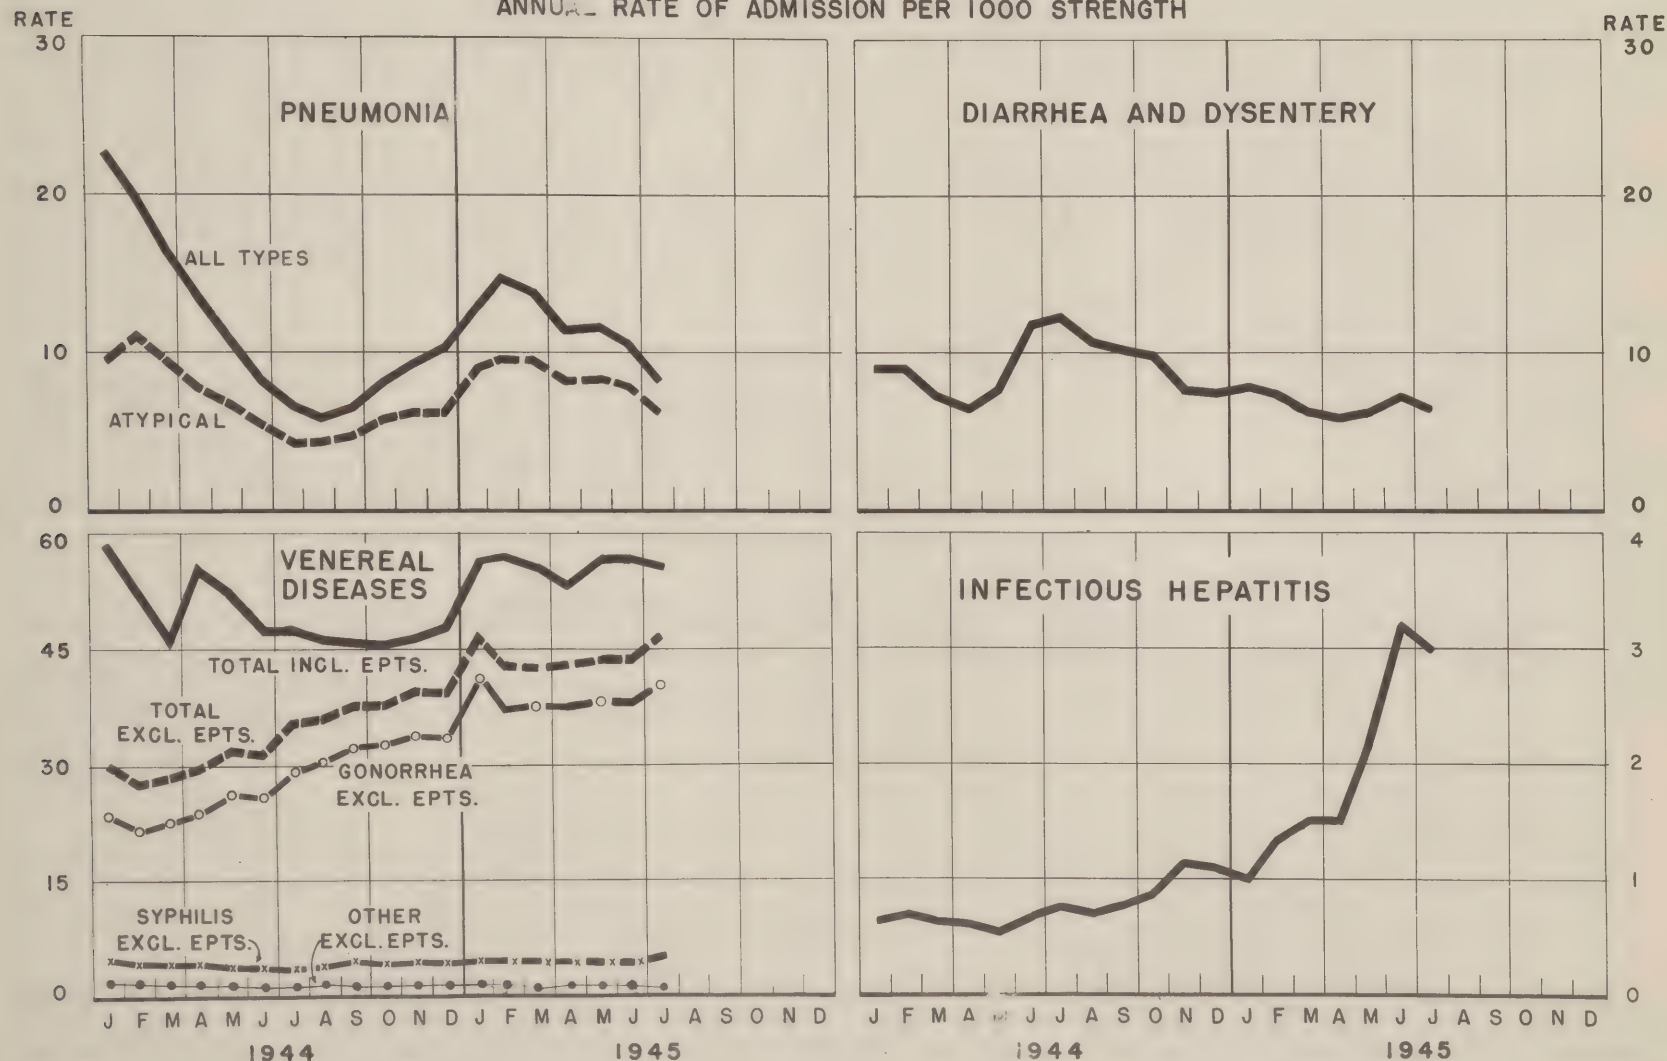

| Service Command | Number Remaining Under Treatment | | Venereal Disease Cases as Percent of All Cases | |
|-----------------|----------------------------------|-------|--|-------|
| | Syphilis | Other | Syphilis | Other |
| TOTAL U.S. | 1405 | 838 | .47 | .28 |
| I | 76 | 7 | .5 | .1 |
| II | 55 | 51 | .2 | .2 |
| III | 159 | 86 | .6 | .3 |
| MDW | 9 | 24 | .2 | .6 |
| IV | 324 | 186 | .5 | .3 |
| V | 63 | 75 | .2 | .3 |
| VI | 10 | 45 | .1 | .2 |
| VII | 144 | 88 | .5 | .3 |
| VIII | 357 | 159 | .8 | .3 |
| IX | 208 | 117 | .5 | .3 |

The great bulk of the cases remaining were contracted after entry on active service. The number of syphilis cases remaining at the end of July was 4 percent higher than for June, while the number of cases of venereal diseases other than syphilis increased 4 percent. Total venereal cases represented .75 percent of the total number of patients remaining under treatment in hospital. The very much longer duration of hospitalization for syphilis is indicated by the fact that only 11 percent of the total venereal admissions (excluding EPTS cases) were for this cause, even though 63 percent of the cases remaining under treatment were syphilis cases.

MORBIDITY FROM—PNEUMONIA—DIARRHEA AND DYSENTERY

VENEREAL DISEASES—INFECTIOUS HEPATITIS

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

Morbidity represented by venereal EPTS cases was reported at 9.6 per thousand during July as compared with 12.7 per thousand for June. Variations in the admission rate for venereal EPTS cases as between Service Commands have relatively little significance, because they reflect a different geographical and racial distribution of Army personnel as compared with that of new inductees. The average weekly number of venereal EPTS cases in July was 589 as compared with 722 in June, reflecting the trend of the number of men inducted into the Army.

The total days lost from duty during July because of venereal disease were about 60,000 or an average of 15,000 per week; this represented a non-effective rate of .67 per thousand as compared with .63 in June.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis decreased slightly to 3.0 per thousand from 3.2 per thousand in June which is the highest rate reported since the epidemic in the summer of 1942. The First and Second Service Commands with rates of 8.2 per thousand continued to register the highest morbidity from this cause.

MEASLES:

Morbidity from measles decreased about 50 percent during July but was double the corresponding rate experienced for July 1944. The Sixth and Ninth Service Commands were the only ones to report an admission rate in June in excess of that for the entire country.

MUMPS:

Morbidity from mumps decreased by almost 40 percent in July to 3.3 per thousand, which is the lowest figure registered this year although this rate is about 35 percent above the corresponding figure for July 1944.

SCARLET FEVER:

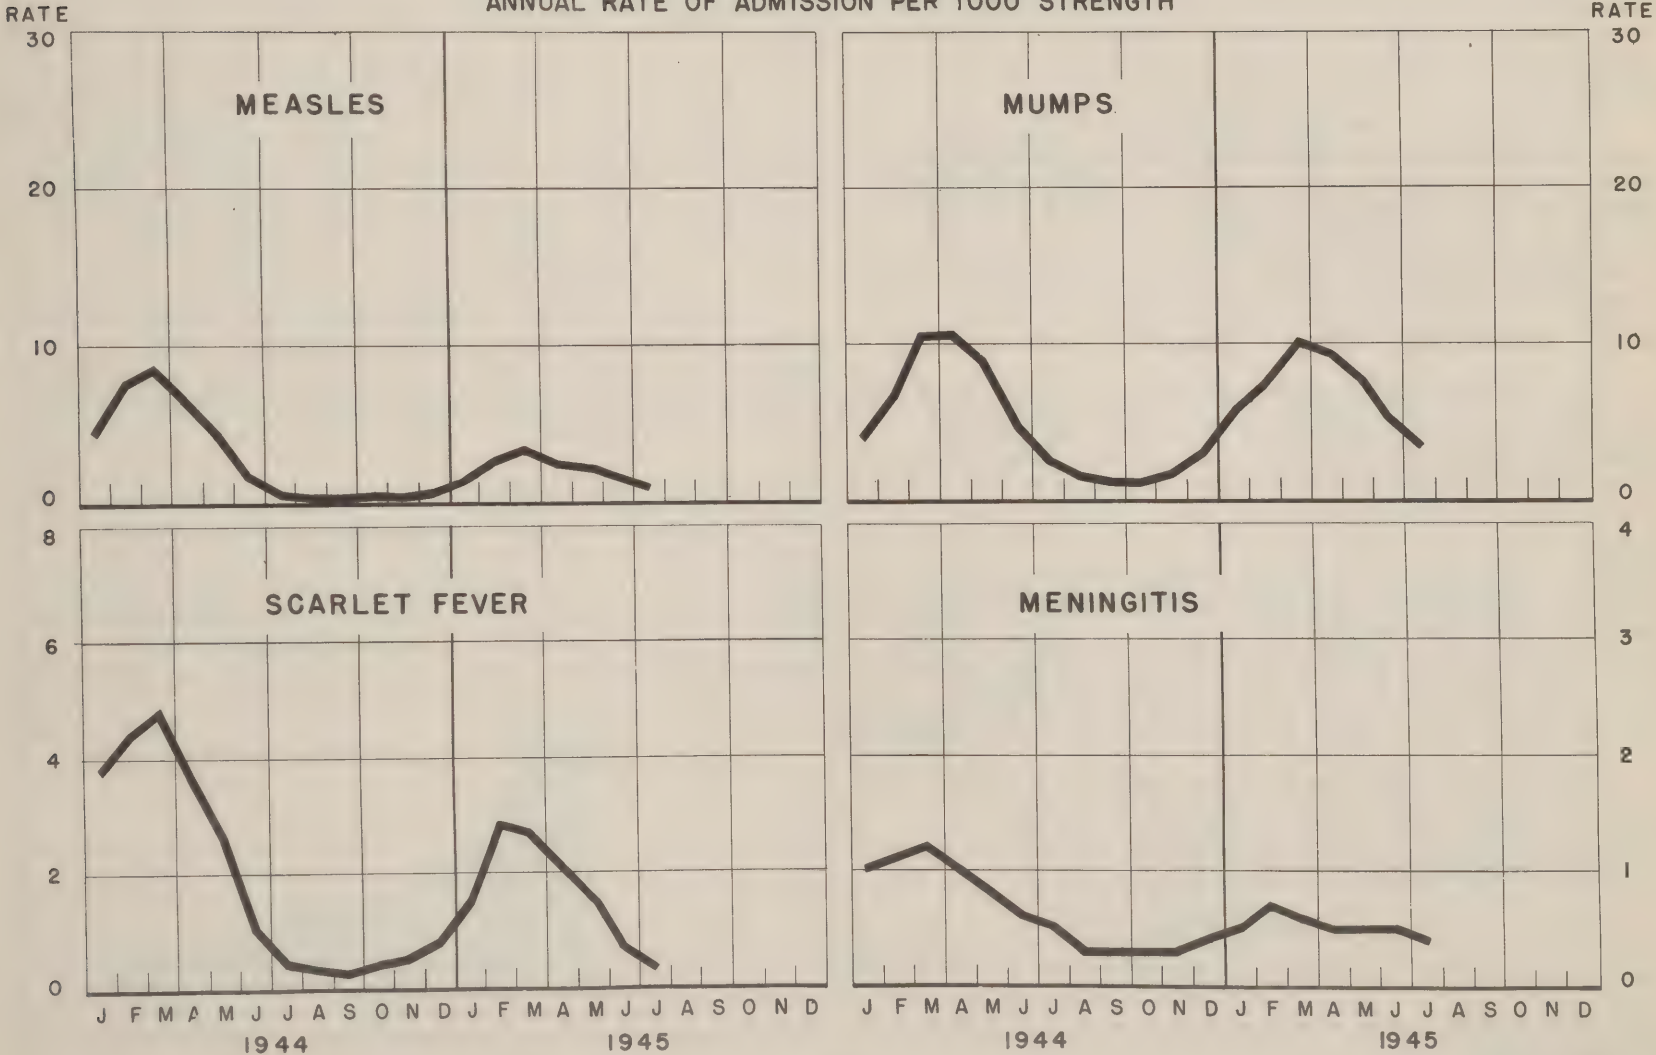

Morbidity from scarlet fever decreased by about 60 percent in July to be reported at .3 per thousand. The admission rate for July 1945 was about 30 percent lower than for July 1944. The Seventh and Ninth Service Commands reported a rate significantly in excess of that for the entire United States.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis remained at about the same level as during the previous six months (about .5 per thousand). The current experience is about 20 percent lower than that during the corresponding period of 1944.

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

RHEUMATIC FEVER:

Morbidity from rheumatic fever decreased 20 percent during July, being reported at .7 per thousand. The First Service Command reported the highest morbidity from this cause (1.2 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 1.5 per thousand in July or a notable increase from the rate of 1.2 per thousand in June. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected. The rate at stations other than separation centers was only 1.2 per thousand in July.

As of 27 July there were 2299 cases of tuberculosis remaining under treatment representing .8 percent of all patients in hospitals. Of the total cases, 1162 were at Fitzsimons GH and 679 at Bruns GH.

MALARIA:

Morbidity from malaria acquired inside the United States was reported at .1 per thousand in July. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 940 per week, which is the lowest figure so far recorded this year.

As of 27 July there were 2559 cases of malaria under treatment, representing .9 percent of all patients in hospital. Only 12 cases were those where the disease was acquired in this country.

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders decreased by over 10 percent in July to 38.6 per thousand, which is the lowest rate reported since August 1944.

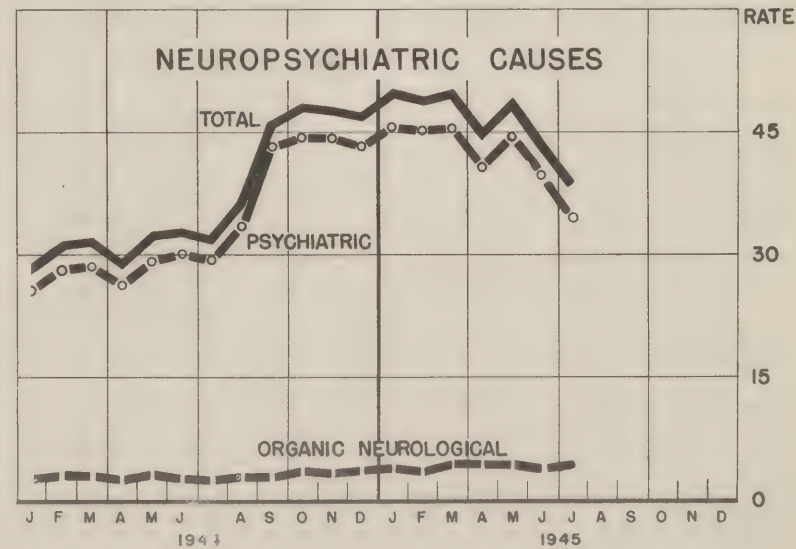

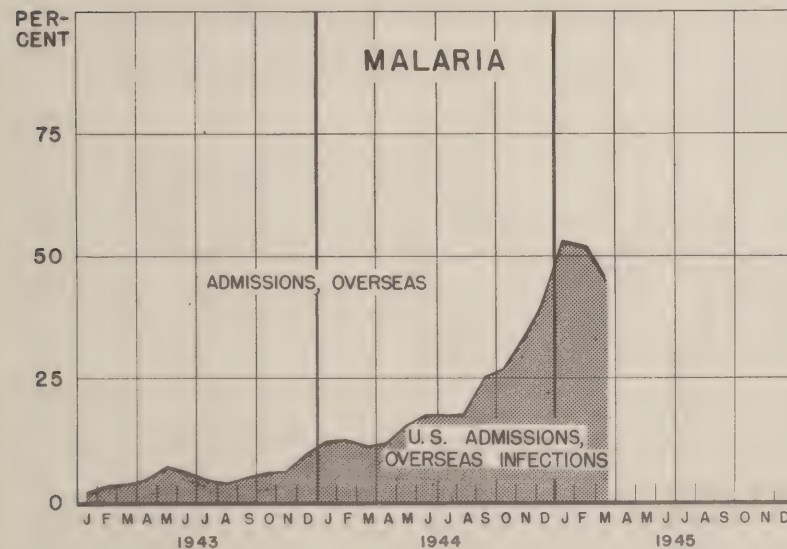

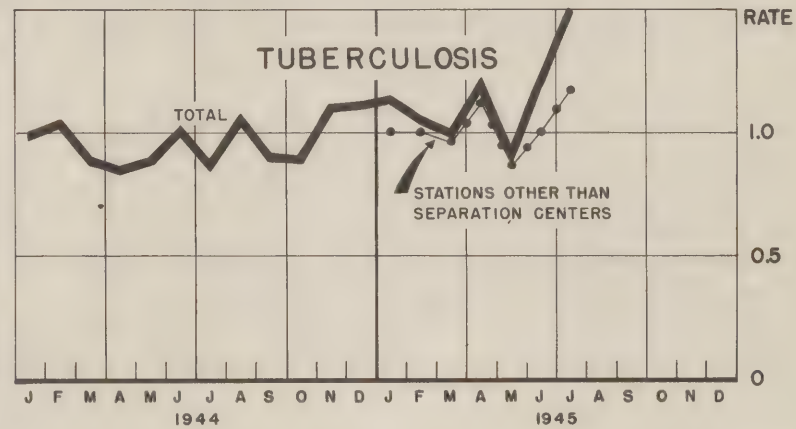

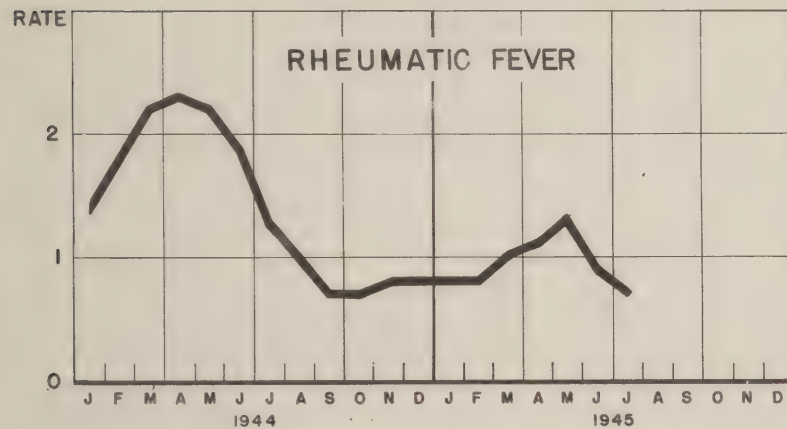

During July there was an average of 2640 CDD's per week given to enlisted men classified as neuropsychiatric cases, or about 2 percent higher than the weekly average for June. The CDD's in July for men with neuropsychiatric disorders represented 31 percent of all CDD's or lower than in June (37 percent).

In July, organic neurological cases accounted for 11 percent of all neuropsychiatric cases. Only in the Second and Fifth Service Commands did the proportion of organic neurological cases exceed 15 percent of the total neuropsychiatric cases.

The number of neuropsychiatric cases remaining under treatment as of 27 July was 34,928 or about 2600 less than at the end of June. During July the number of locked ward cases remained the same, while the open ward cases decreased by 8 percent. Neuropsychiatric cases remaining represented 10.7 percent of all patients in hospital, with open ward cases being 9.9 percent and locked ward cases 1.8 percent.

MORBIDITY FROM — RHEUMATIC FEVER — TUBERCULOSIS MALARIA — NEUROPSYCHIATRIC CAUSES

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

MORTALITY:

Mortality from all causes during July was reported at 2.79 per year per thousand strength. The mortality rate from disease remained at .79 per thousand in July, while the reported mortality rate from injury increased from 1.60 per thousand to 1.85 per thousand.

It should be noted that the reporting of deaths on Forms 86ab is not complete, particularly for deaths from injury for which the understatement may be as great as 10 percent (see Special Report on Deaths in 1944 in Weekly Health Report, Vol. V, No. 27). The mortality rate from injury when adjusted to allow for this under-reporting is about 2.05 per thousand, resulting in an estimated total death rate from all causes of 2.99 per thousand.

NON-EFFECTIVE RATE:

The non-effective rate for Army personnel stationed in this country was about 27 per thousand in July or lower than the figure of 30 for June.

The mean number of non-effectives (including evacuees from overseas) for July was reported at 95 per thousand strength or 6 percent lower than in June; most of this decrease arose because of a decrease in hospital population at General and Convalescent Hospitals. The mean number of injury non-effectives per thousand strength in July was 15.9 per thousand.

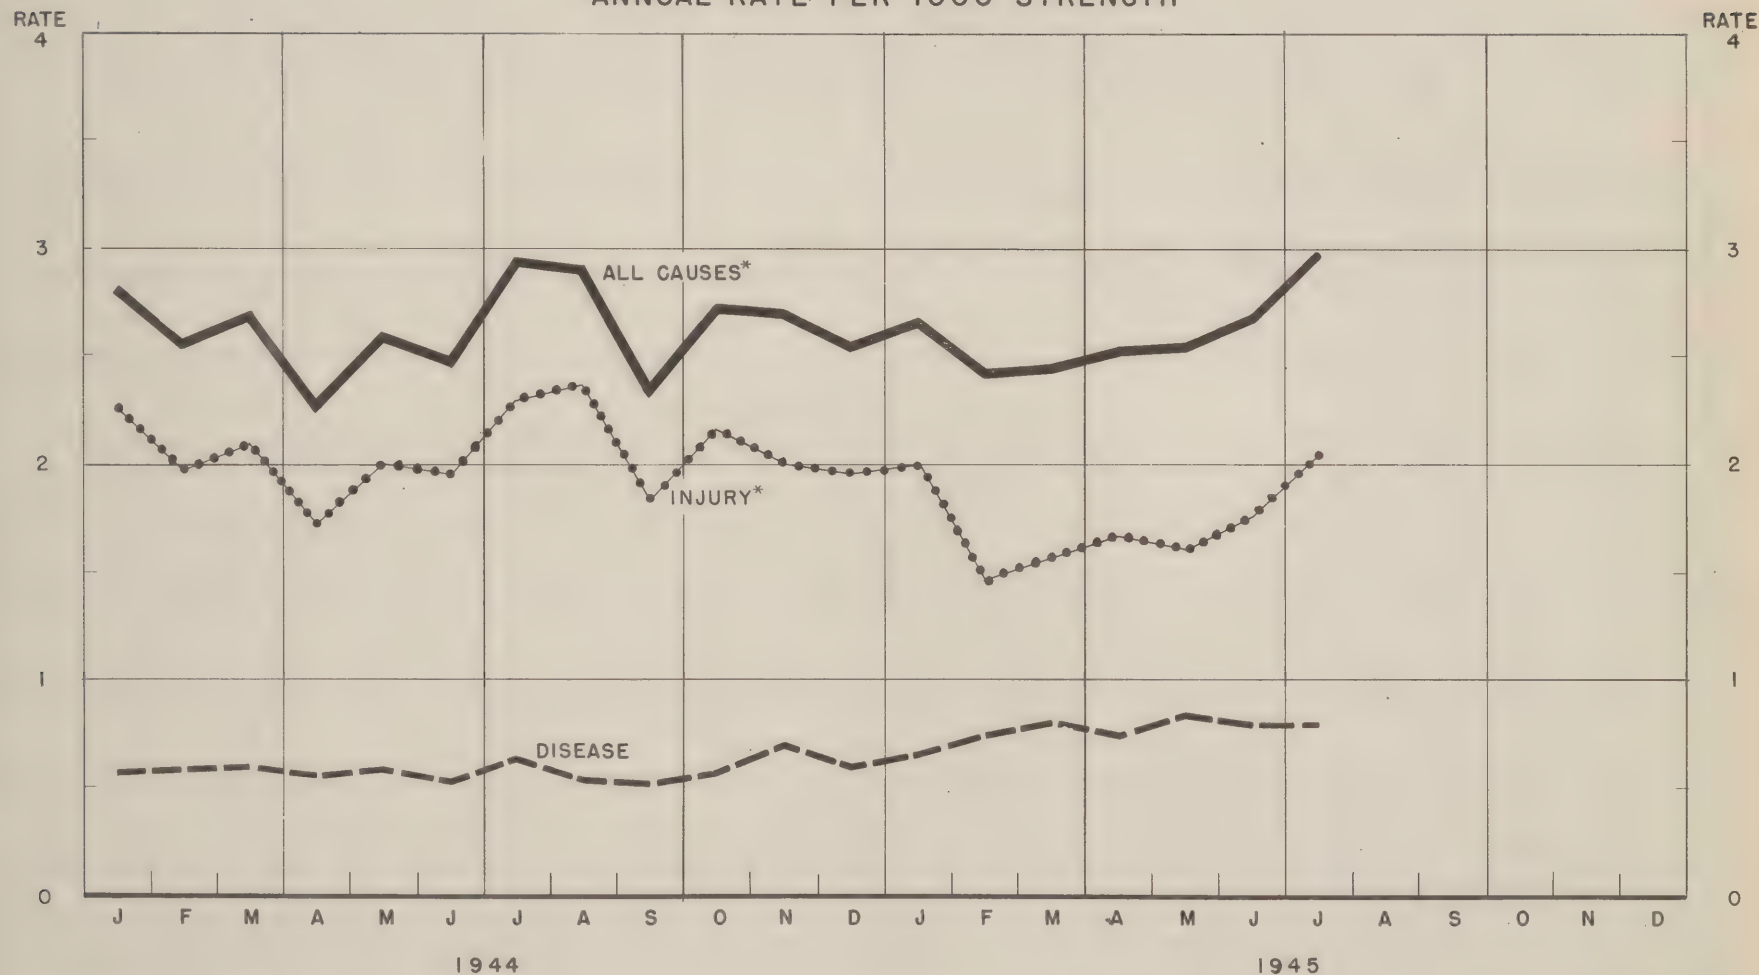

Variations in the mean number of non-effectives per thousand strength by Service Command do not reflect so much the variations in morbidity between Service Commands as the varying number of General and Convalescent Hospitals in each Service Command. When comparisons are made between the rates excluding such hospitals the variations by Service Command are seen to be very much smaller than when the days lost in these hospitals are included, as evidenced in the table below:

| Service Command | Including Gen. and Conv. Hosp. | Excluding Gen. and Conv. Hosp. |
|--------------------|--------------------------------------|--------------------------------------|
| TOTAL U.S. | 95 | 21 |
| I | 170 | 12 |
